

Nasal Spray

Common Use: This medication is used for intranasal route.

Directions:

1. Remove cap from nasal applicator. Prime the pump by pressing downward on the collar of the pump then releasing. Repeat several times until a full, fine mist appears. (This is only done if the pump is new or has not been used in awhile.)
2. Spray is to be used in one or both nostrils, whichever your physician has prescribed.
3. Blow nose to clear nostrils.
4. Tilt head back slightly while pressing down of unaffected side of nostril with finger.
5. Insert nasal applicator into the other nostril. Press down on collar of pump while deeply breathing in through the nose. Repeat process only if indicated by physician.
6. Replace cap onto tip of bottle.

Precaution: Follow physician's instructions carefully. Do not use more than dose prescribed. Keep nasal spray refrigerated.
